

Tab, Tab, Attack

I downloaded the zip file, then went to my download directory through the terminal. After checking the contents of the file through the ls command, I unzipped the file, then proceeded to dig through the various directories. Along the way, I came across a file that was highlighted in green, indicating that the file is executable, so I viewed its contents, and that is where I got the flag, picoCTF{l3v3l_up!_t4k3_4_r35t!_fc588427}.
