

CanYouSee

The CanYouSee challenge by Mubarak Mikail required finding a concealed flag embedded in a JPEG image.. The hints indicated that I should look at the information in the file, so I used exiftool and found a piece of information called the attribution URL that held a Base64-encoded value. So when I decoded it i got the flag as picoCTF{ME74D47A_HIDD3N_6a9f5ac4}
